［Outline］

You can observe how the eyes appear when two dice are thrown at the same time.

What is the ratio at which the product of two dice rolls is odd ?

If you have conducted many experiments to throw two dice at the same time , how about the ratio of product of the two dice to an odd number when the number of experiments is increased compared to when the number of experiments is small ?

Also , let's mathematically find the probability that the product of the two dice will be odd .
