［Outline］

You can observe how one is drawn from the 52 playing cards excluding the joker.

What is the percentage of playing cards that are multiples of 3 ?

If you have conducted many experiments to find the ratio of drawing cards that are multiples of 3 , what can you say if you draw more playing cards in each experiment than when you draw fewer cards ?

Also,let's mathematically find the probability of drawing playing cards that are multiples of 3.
